

TEKNO Design Angelo Pinaffo

Multi-purpose table with an elegant aluminum die-cast leg, ideal for offices and public spaces in general. Thanks to its ergonomic released handles and breaking castors, TEKNO flips up effortlessly to allow for easy storage and nesting within any environment. The flip mechanism is designed and equipped with a polypropylene carter to achieve high aesthetic and security standards by hiding any visible mobile parts. Practical linking devices are available to align and connect the tables in endless configurations, as well as adjustable glides that may be used simultaneously with castors for an unconventional look.

ACCESSORIES

Male+female grey plastic connector for joining and levelling tables (for flip-top tables and LEG with MDF top)

Elongated glide for Tekno leg

Black painted single book holder for school desk
